

PRESS RELEASE

M. G. Lorraine Media announces release for Fossils!

The first installment of A Dorchester Sisters Trilogy.

INDIANAPOLIS, IN, US | April 2026: M. G. Lorraine Media announces the release of the first book in the Dorchester Sisters novel series - Fossils: A Dorchester Sisters Novel.

A discovery buried for millions of years could disappear before it is ever studied. In Fossils: A Dorchester Sisters Novel, M. G. Lorraine introduces readers to Kileah Dorchester, a paleontologist whose first excavation as team leader takes an unexpected turn when a shipment of rare fossils vanishes. Set on the Nebraska plains, the novel follows Kileah as she learns that her missing specimens are being offered for sale on the black market. For her, the loss is more than a professional setback: irreplaceable evidence could be hidden away in a private collection, its scientific significance left unexplored. Determined to recover the fossils, Kileah seeks entry to the auction. But troubling incidents at the excavation raise another question: did someone close to the project help orchestrate the theft?

When longtime family friend Quinton Palmer arrives to assist, his experience investigating corporate theft brings a new perspective to the mystery. Together, they must navigate suspicions within the camp and uncover what happened before the missing discoveries slip beyond their reach. Combining an excavation setting with family ties, concealed motives, and a determined protagonist, Fossils explores the tension between preserving discoveries for shared knowledge and exploiting them for private gain.
